" Cad-Capture provided a seamless and professional integration "

Customer Focus

Project : Shetland Islands Council

Local Authority:
Shetland Islands Council

The project:
To create Intelligent CAD Files for each of the Council's education and corporate properties.

Cad-Capture was required to implement its expertise in:

1) Accurate, meaured building surveys

2) Production of Intelligent CAD Files for incorporation into a property management system

Shetland Islands Council has recently awarded Cad-Capture a contract to produce Intelligent CAD Files for the majority of its corporate and educational properties for integration into a property management system using Cad-Capture's versatile AssetCapture™ solution.

In 2004, Shetland Islands Council identified a need to update its existing drawings as they were out of date and not to scale. The first stage was for Cad-Capture to undertake a pilot which involved two surveyors visiting the Island to complete full measured surveys of five properties, a mixture of educational and corporate with a gross external area of 16,200sqm . The information collected was then brought back to Cad-Capture's head office ready for conversion into Intelligent CAD Files. The pilot was extremely successful.

Cad-Capture has now been awarded the contract to undertake accurate measured electronic building surveys along with the production of Intelligent CAD Files of another 17 of Shetland Islands properties, again a mixture of education and corporate with a gross external area of 26,000sqm.

Carl Symons, Technical Support Manager at Shetland Islands Council said "Cad-Capture provided a seamless and professional integrated solution".

AssetCapture™
AssetCapture is a fast, reliable and unique solution from Cad-Capture for converting property portfolios into Intelligent CAD Files™, effectively and accurately.

AssetCapture automates the process of data capture and integrates the Intelligent

CAD Files™ with a range of leading asset management, facilities management and property management systems.

Asset management is traditionally a complex, costly and time-consuming exercise. There are many systems available on the market but they are only as good as the information that is held within them.

This is where AssetCapture and its Intelligent CAD Files™ come into their own. The ability to populate databases accurately, automatically and directly from the Intelligent CAD File™ can reap major benefits in reduced time, lower costs, increased efficiency, improved accuracy and better presentation of information. AssetCapture enables you to maximise your existing resources and benefits
